

Distributed Feedback Lasers

nanoplus Distributed Feedback Lasers (DFB) are specifically designed for high-precision

gas detection using tunable diode laser absorption spectroscopy (TDLAS). Our devices

operate **reliably** in more than 30,000 installations worldwide. For more than 20 years nanoplus has set the standard for DFB laser technology and is the only manufacturer

920 nm - 1100 nm

routinely providing DFB lasers at any wavelength.

WAVELENGTH

760–830 nm

830-920 nm

920-1100 nm

1100-1300 nm

1300-1650 nm

1650-1850 nm

1850-2200 nm

2200-2600 nm

2600-2900 nm

2800-4000 nm

4000-4600 nm

4600-5300 nm

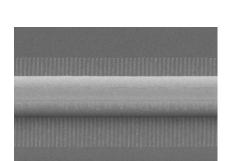

5300-5800 nm

5800-6500 nm

6000-14000 nm

Key features:

- MONOMODE
- CONTINUOUS WAVE
- ROOM TEMPERATURE
- MODE HOP FREE TUNING

Overgrowth-free DFB device processing

Schematic DFB with spectrum

Any **custom wavelength** is possible: You tell us what you need and we deliver it. With our patented DFB technology we design any wavelength **between 760 nm and 14 μm.**

Our excellent **spectral purity** is characterized by a large side mode suppression ratio **(SMSR)** of > **35 dB**, giving your system a low signal to noise ratio against crossinterference.

A **narrow linewidth below 3 MHz** guarantees ultra-precise scanning of the absorption line feature. The **high output power** of **several mW** yields a stronger signal and increases your measurement precision.

Fast and wide wavelength tuning is required for in situ systems. Most customers use a scan rate of 10 kHz and benefit from our very large tuning coefficient.

"Do not change your ideas, let us deliver a laser that fits your application."

We offer **various packaging options**, e.g. several free space housings including TEC and NTC, fiber coupling, **collimation** and **custom designs**. What do you require?

If you require custom specifications, please contact us. Nearly 80 % of our devices are more or less customer-specific. As nanoplus is a fully vertically integrated company, we control the entire process chain from design to packaging. Both nanoplus production facilities are based in Germany. To guarantee consistent product quality we apply a strict and ISO certified quality management system at all levels.

TO5, TO56 and fiber coupled butterfly package

Our sales and R&D teams have long-standing experience in developing lasers. They will advise you in your design and realization phase as well as after-sales: **We make market leaders!**

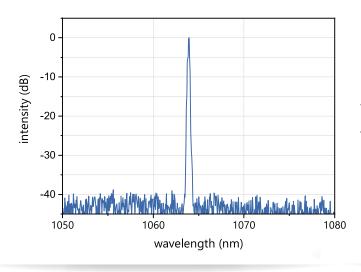

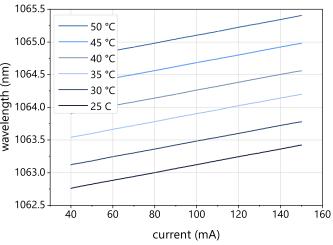

Typical Specifications: 920 nm - 1100 nm

This data sheet reports performance data of a **sample nanoplus DFB laser at 1064 nm**, which is representative for the entire wavelength range.

Typical room temperature cw spectrum of a nanoplus DFB laser at 1064 nm

Typical mode hop free tuning of a nanoplus DFB laser at 1064 nm by current and temperature

electro-optical characteristics	symbol	unit	min.	typ	max.
operating wavelength (at $T_{op'}$ I_{op})	λ_{op}	nm		Please specify to 0.1 nm.	
optical output power (at λ_{op})	P_{op}	mW		20	
operating current	l _{op}	mA		50	
operating voltage	V_{op}	V		3	
threshold current	I_{th}	mA	15	20	25
side mode suppression ratio	SMSR	dB		> 35	
current tuning coefficient	Cı	nm / mA	0.01	0.02	0.025
temperature tuning coefficient	C_{\scriptscriptstyleT}	nm / K	0.07	0.08	0.09
operating chip temperature	T_{op}	°C	+20	+25	+50
operating case temperature*	T_{c}	°C	-20	+25	+50
storage temperature*	T_s	°C	-40	+20	+80

laser packaging options

* non-condensing

TO5 with TEC and NTC, black cap, AR coated window

TO56 without TEC or NTC, sealed, window

c-mount without TEC or NTC

butterfly package with TEC and NTC, SM fiber, FC/APC connector

chip on carrier without TEC, with NTC
